## HOLTER SOFTWARE

### Quick-check before recording starts

As the recording starts, we can immediately check electrode-skin contact and the quality of ECG signals in the software.

### ECG signal filtering to improve signal quality

Using an effective digital filtering technology, there is practically no baseline movement. The smoothing filter removes muscle and network noise components from the signals without distorting QRS complexes.

### Saving time with automatic noise detection

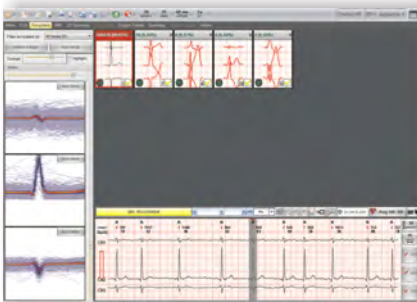

There is no need to view or analyse the record more than once to exclude noisy channels or noisy sections from the analysis. The software automatically excludes the noisy sections, saving a significant amount of time.

### Channel-selective QRS detection to reduce the number of lost intervals

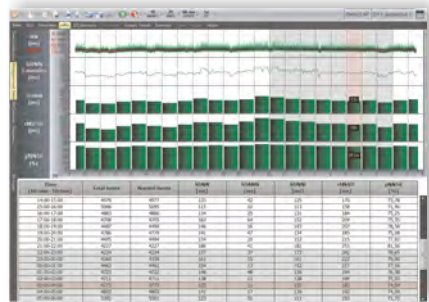

Due to channel-selective QRS detection, the number of lost intervals will be reduced. In case of multichannel records the QRS detector can select one or more ECG channels for beat detection.

### Effective template analysis for high precision in results

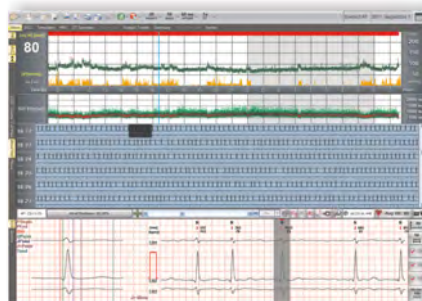

It allows a quick and effective way to check and, if need be, modify QRS types and form classifications. This solution enables a holter record to be evaluated in an average of 5-10 minutes.

# RESTING ECG SYSTEMS

## Advantages of PC-based ECG Systems

PC-BASED RESTING ECGs HAVE SEVERAL ADVANTAGES COMPARED TO CONVENTIONAL ECG SYSTEMS USING THERMAL PAPER:

### **Digital data storage**

Thousands of records can be stored while taking up minimal space

### **Cost-efficient operation**

Digital data storage and printing records on regular paper instead of expensive thermal paper saves costs

### **Simple patient database management**

Patient databases can be conveniently viewed on a screen, no need to file through patient cards

### **Filters**

There are several filters when searching for a patient's record, it saves time in the administration process

### **Reliable data storage**

The record does not fade or crinkle

### **Record mobility**

The record can be easily copied, uploaded to a portal or sent via email

### **Compatibility**

Records can be saved in various file formats (jpg, pdf, etc.)

### **Hospital information systems**

Compatible with DICOM, GDT, MFER and HL7

### **Customizable views**

A computer screen is a perfect means to display the different ECG channels, and we can also:

- switch channels on and off
- set paper speed and amplitude
- set the median's size

### **Enclose doctor's diagnosis**

It is possible to add a diagnosis to the record itself

### **Automatic interpretation**

The doctor only needs to check the automatic interpretation of the software, which makes the diagnostic process shorter and easier

To conclude, we are certain that the PC-based ECG systems of Labtech Ltd. will not disappoint you. Our top priority in engineering our software has been to create a product which is easy to use and provides valuable support to doctors in their work by all possible means.
